Class Description

This class would go over the basic concepts of engine company operations, as it pertains to hose-line selection, stretching hose-line to the proper location, hose-line positions (nozzle, backup, and door position), maneuver hose-line through a structure, etc. Another added topic to the class would be a simple hands on forcible entry station. Traditionally, engine companies are the back bone of most Kansas communities, and the functions on the fire-ground center around the fire engine on scene.
